# Precursors in GBM and LAT GRBs

**Sylvia J. Zhu**  
NASA-GSFC / UMD

*on behalf of the LAT and GBM GRB groups*

## 0. Choose a definition

## 1. Identify GRBs with precursors

### 1.1. Assign categories

## 2. Analysis

### 2.1. Temporal

### 2.2. Spectral

### 2.3. Energetics

## 3. Future work

## 0. Choose a definition

### 1. Identify GRBs with precursors

#### 1.1. Assign categories

## 2. Analysis

### 2.1. Temporal

### 2.2. Spectral

### 2.3. Energetics

## 3. Future work

Which of these has a **precursor**?

## 0. Choose a definition

### 1. Identify GRBs with precursors

#### 1.1. Assign categories

### 2. Analysis

#### 2.1. Temporal

#### 2.2. Spectral

#### 2.3. Energetics

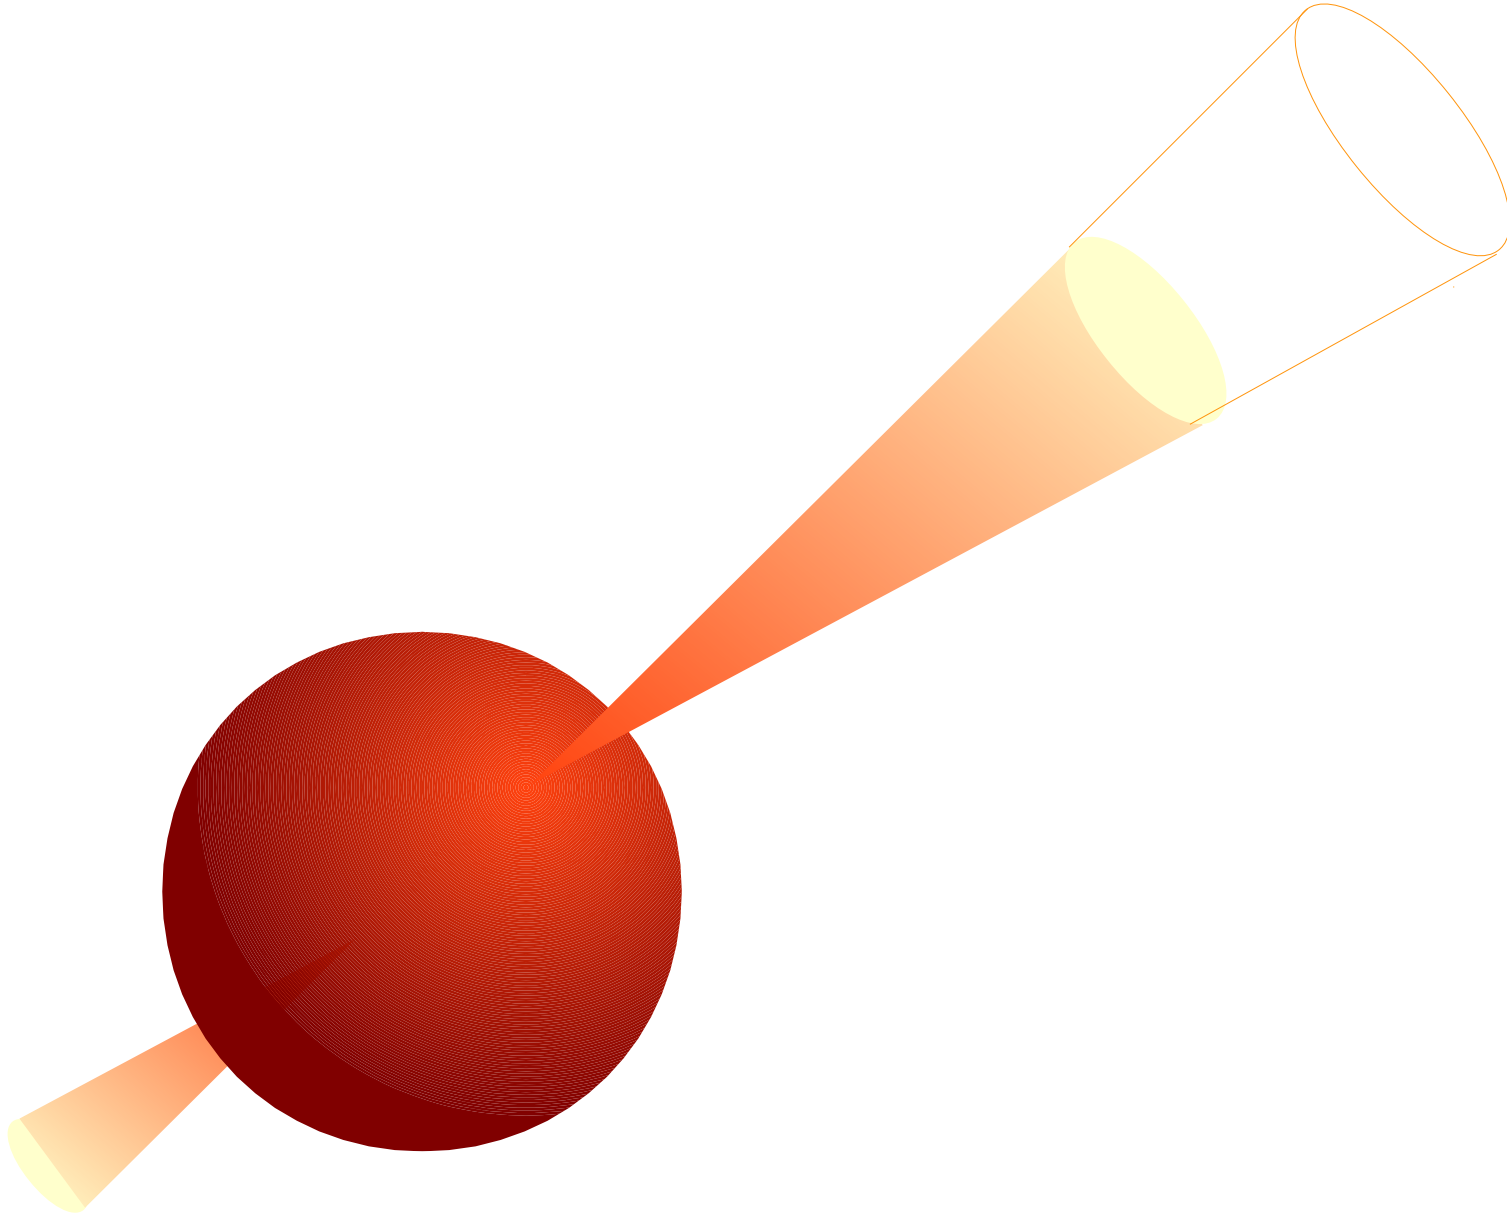

### 3. Future work

I shall not today attempt further to define the kinds of material I understand to be embraced within that shorthand description [ **“precursor”** ]; and perhaps I could never succeed in intelligibly doing so. But **I know it when I see it**, and the motion picture involved in this case is not that. [*Emphasis added.*]

—Justice Potter Stewart, *concurring opinion in Jacobellis v. Ohio 378 U.S. 184 (1964)*, regarding possible obscenity in *The Lovers*.

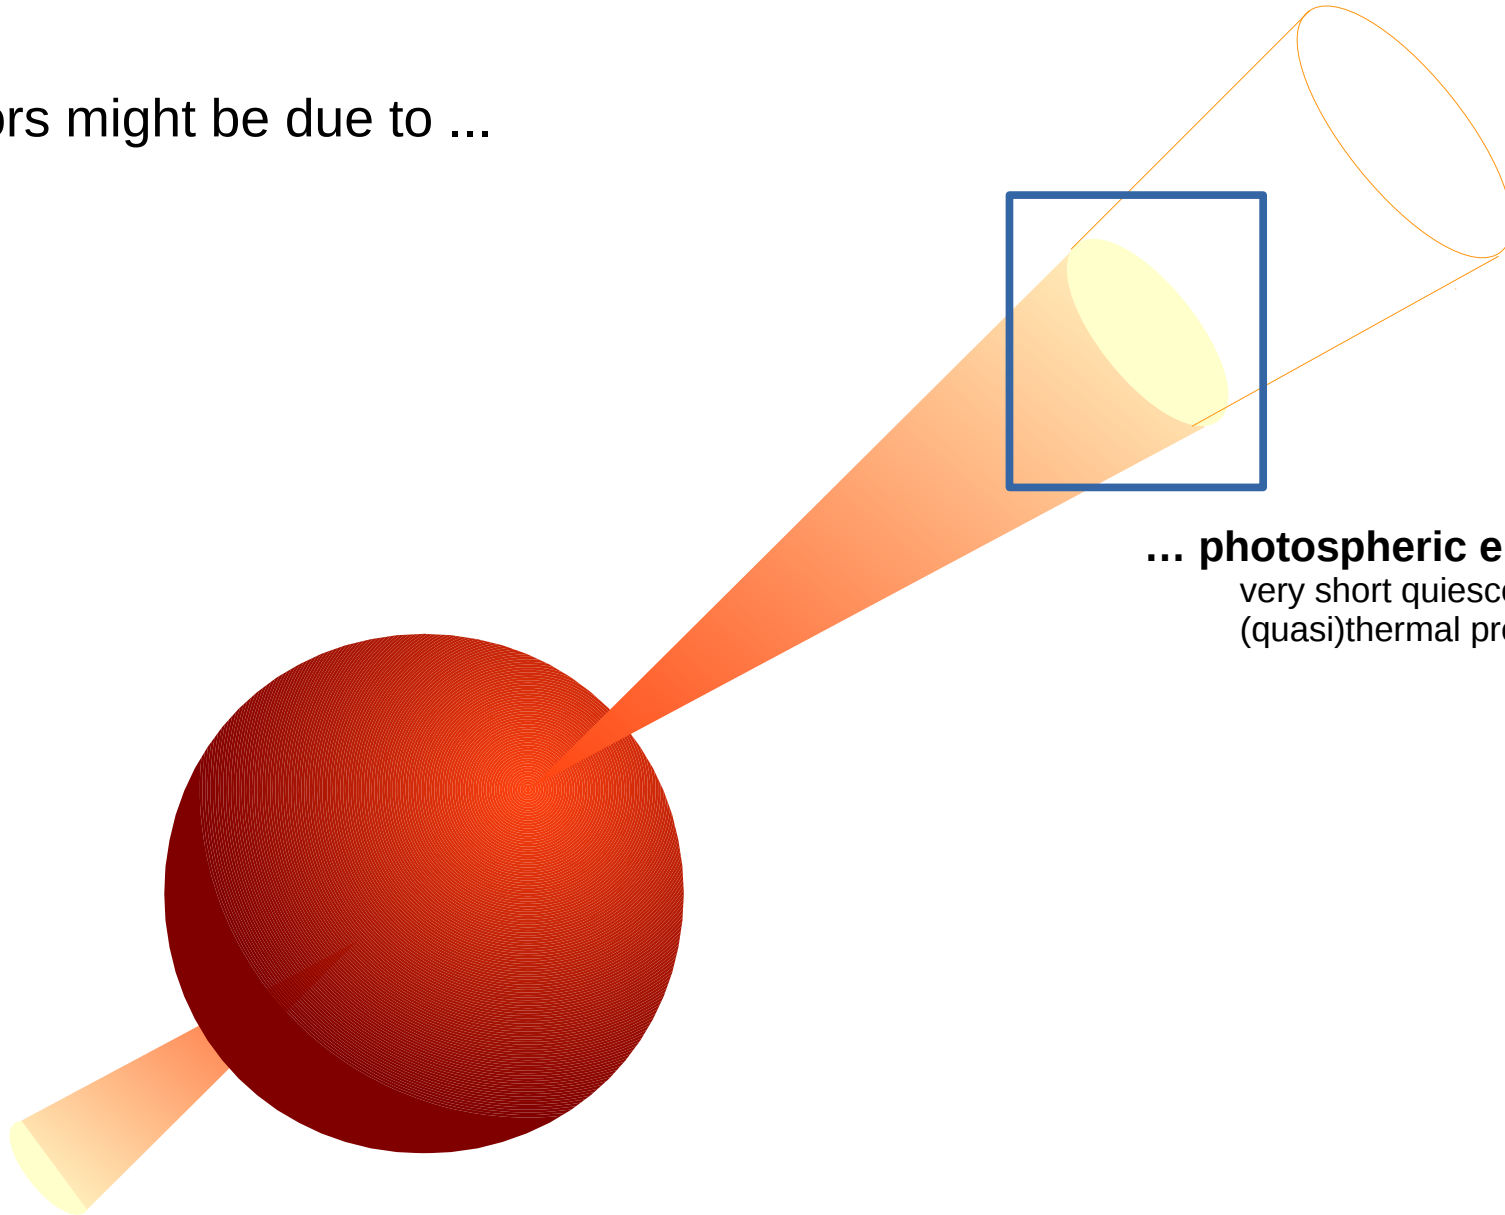

A **precursor** is an episode of **prompt emission** ...  
... that is **dimmer** than the dominant emission  
... and **precedes** the dominant emission  
... sometimes by a well-defined quiescent period  
(but not always!)

# Motivation

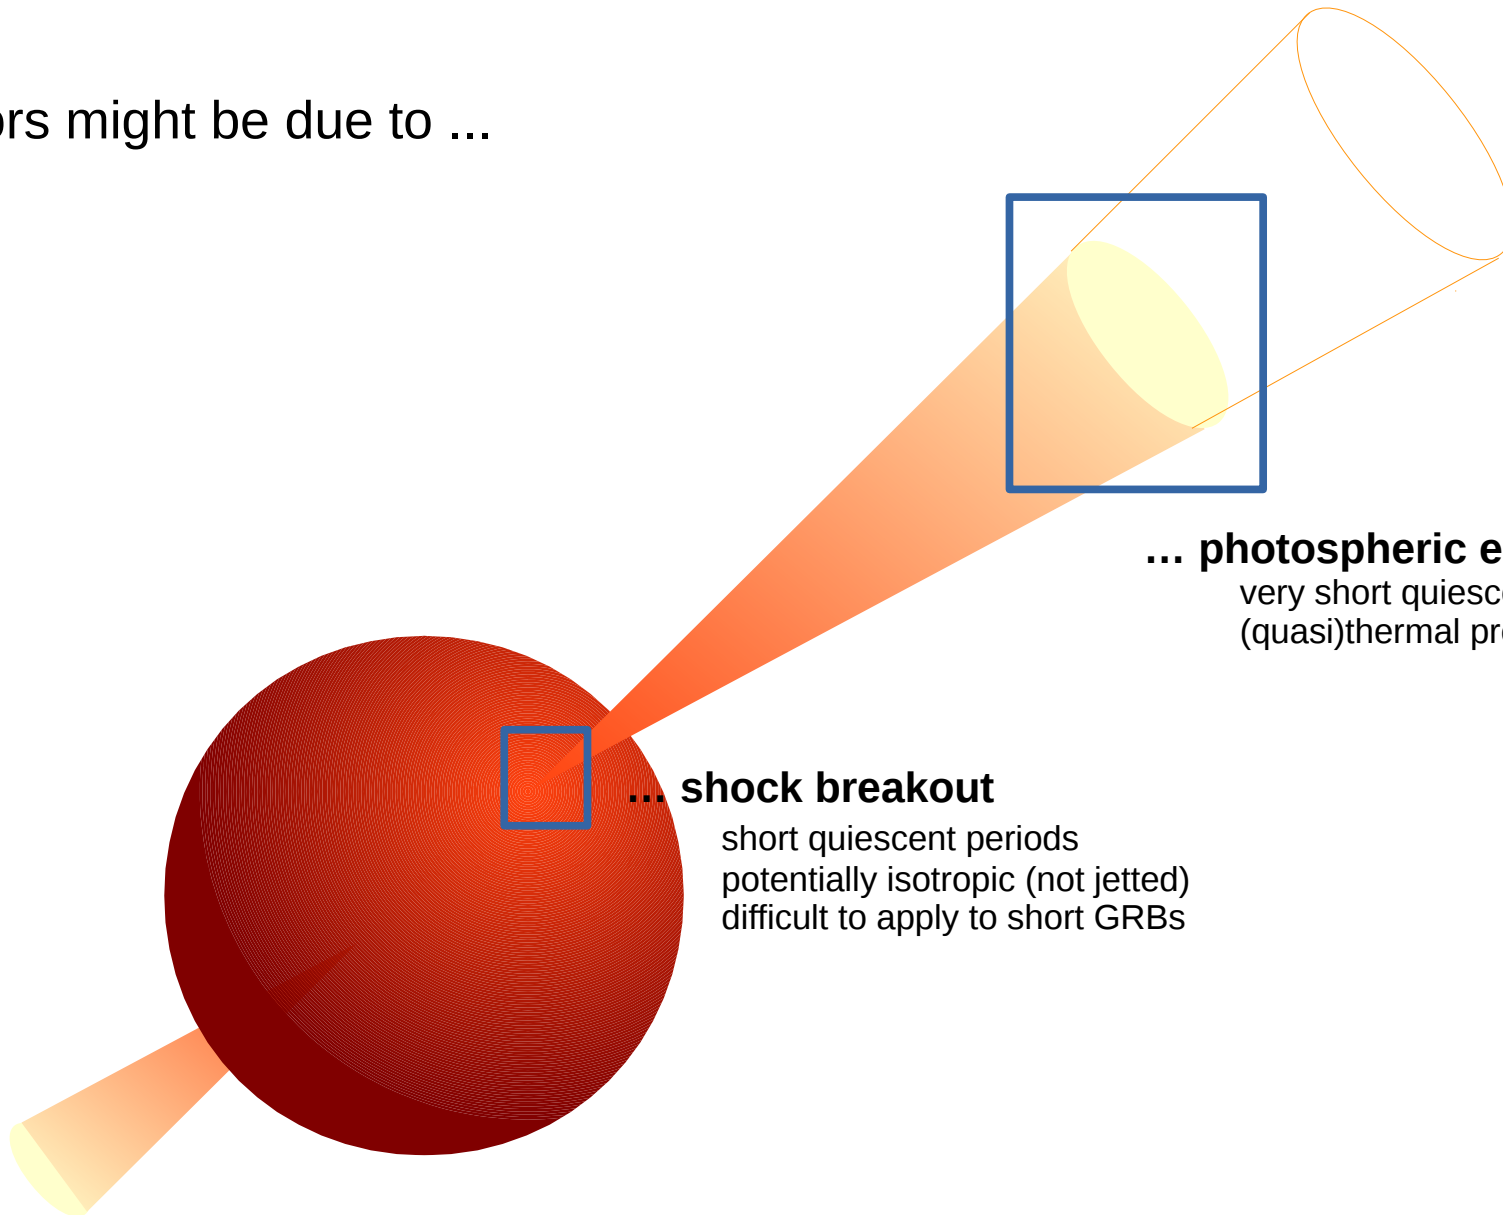

Precursors might be due to ...

... **photospheric emission**  
very short quiescent periods  
(quasi)thermal precursor

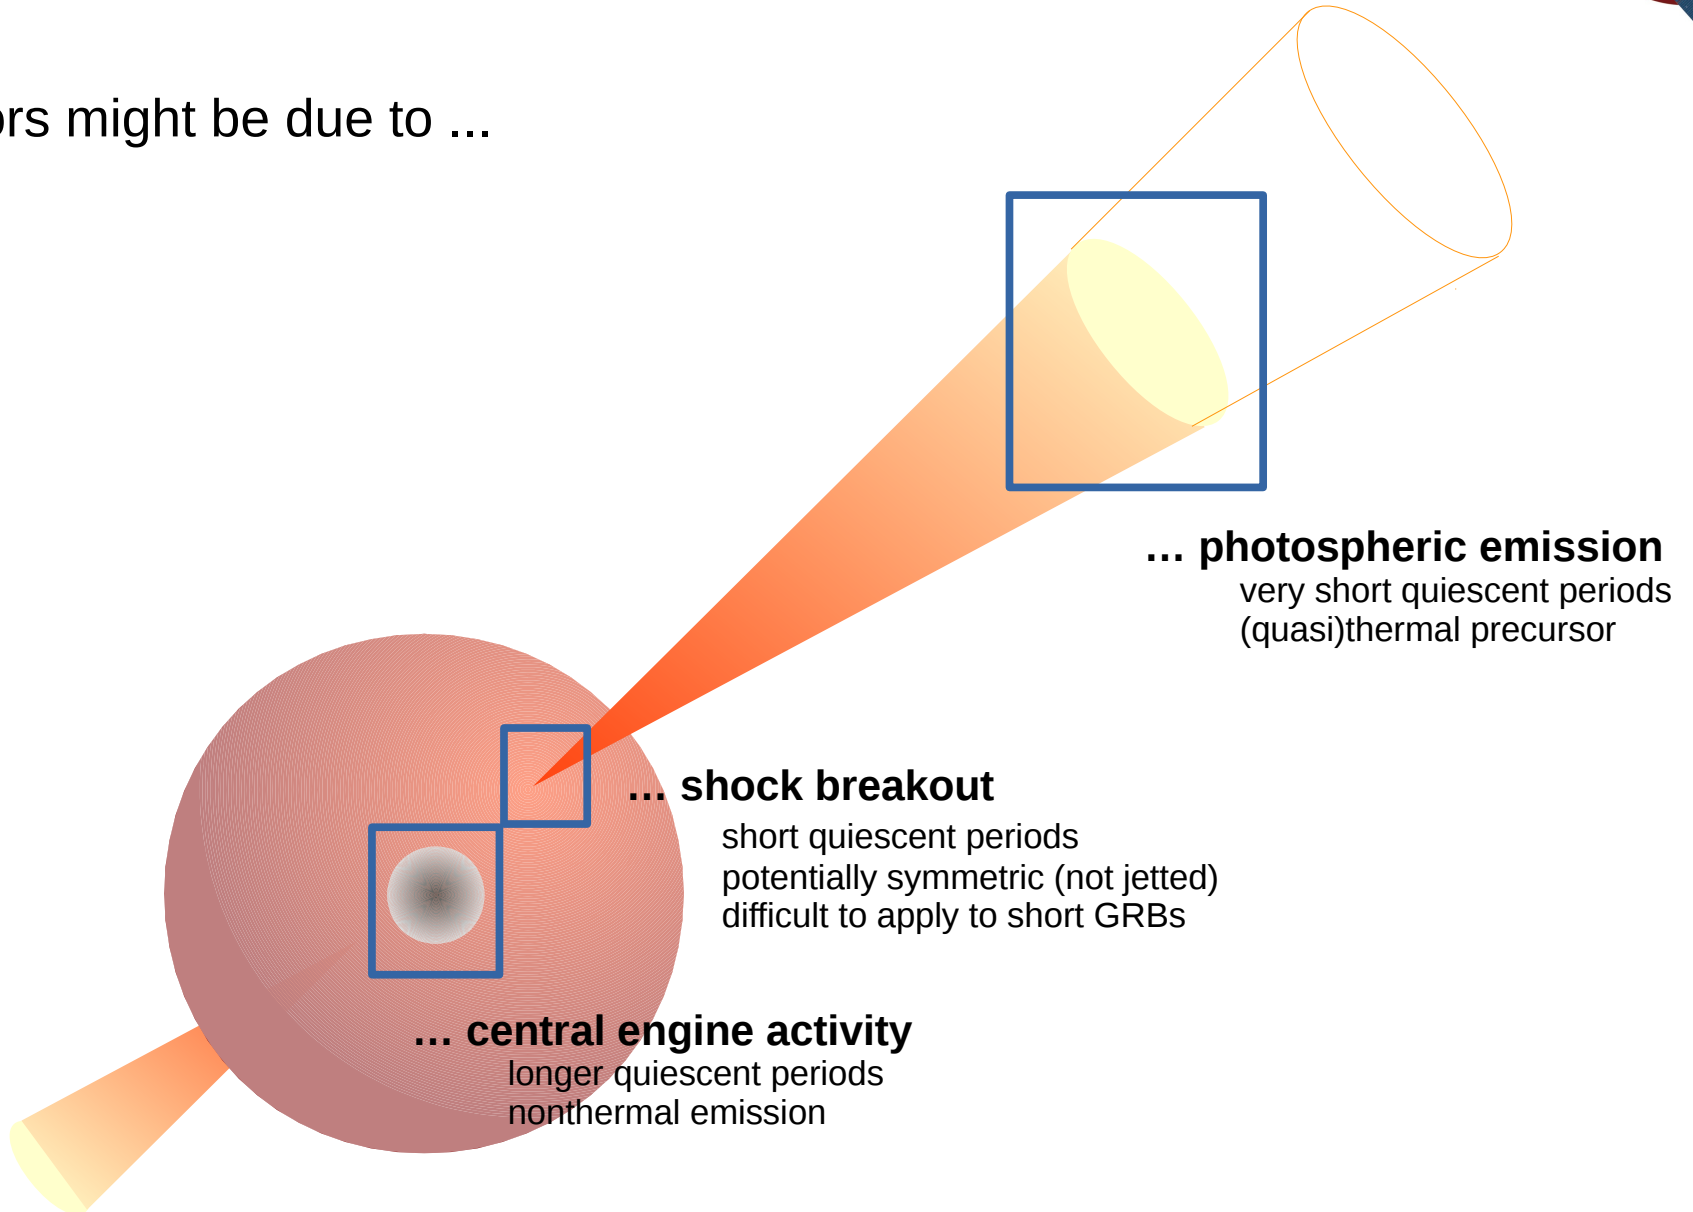

Precursors might be due to ...

Precursors might be due to ...

**GBM** Gamma-ray **B**urst **M**onitor  
 12 (NaI) + 2 (BGO) detectors  
 FOV: entire unoccluded sky  
 8 keV to 40 MeV  
 ~1500 bursts (~1 every day or two)

**LAT** Large **A**rea **T**elescope  
 Pair production telescope  
 FOV: 2.4 steradian (~20% of sky)  
 20 MeV to >300 GeV  
 84 bursts as of mid Oct 2014

0. Choose a definition

**1. Identify GRBs with precursors** using a **Bayesian blocks** algorithm  
on all GBM bursts up to the end of 2013

1.1. Assign categories

Gory details:

Run Bayes blocks on raw NaI LCs

Use the brightest 2 or 3 (unblocked) NaIs

Prior = # of change points expected

Define durations using the change points found

Perform spectral analyses (RMFIT)

Power law, Band function, PL w/ exponential cutoff

Brightest (2 or 3) NaI + (1) BGO detectors

Standard energy selections (see GBM catalogs)

Standard background subtraction (see GBM catalogs)

2. Analysis

2.1. Temporal

2.2. Spectral

2.3. Energetics

3. Future work

0. Choose a definition

1. Identify GRBs with precursors

## 1.1. Assign categories

2. Analysis

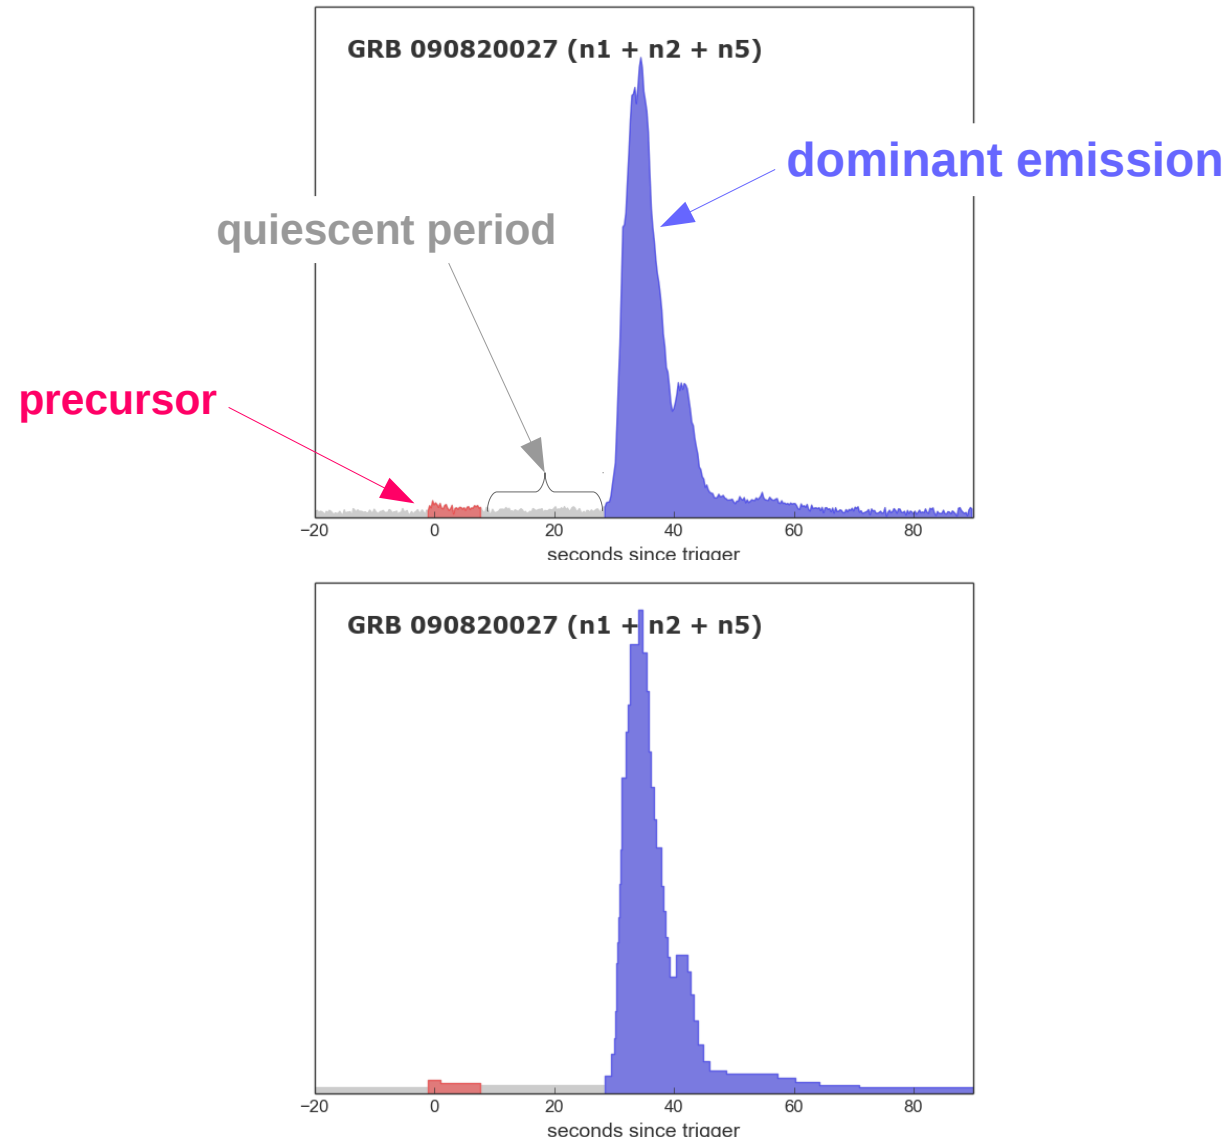

2.1. Temporal

2.2. Spectral

2.3. Energetics

3. Future work

**“Best”**

0. Choose a definition

1. Identify GRBs with precursors

## 1.1. Assign categories

2. Analysis

2.1. Temporal

2.2. Spectral

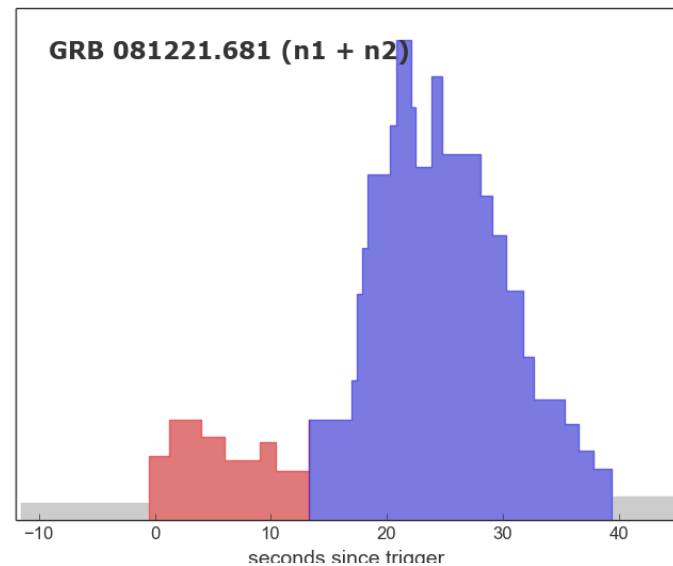

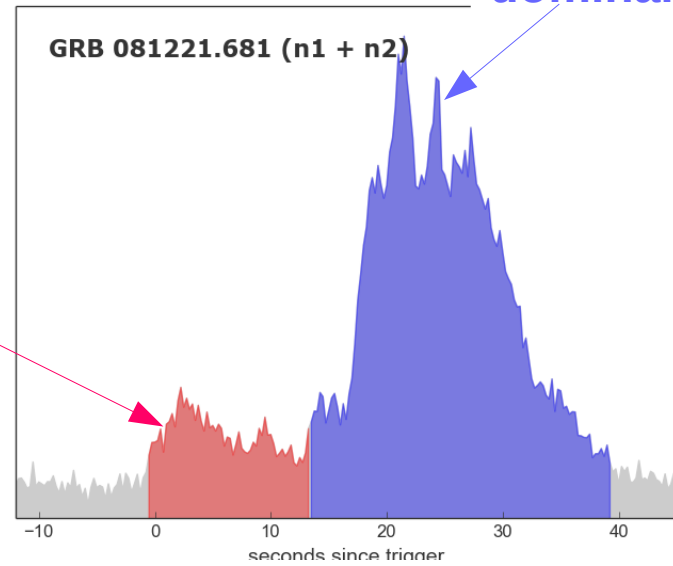

2.3. Energetics

3. Future work

**“Good”**

**dominant emission**

**precursor**

“OK”

0. Choose a definition

1. Identify GRBs with precursors

## 1.1. Assign categories

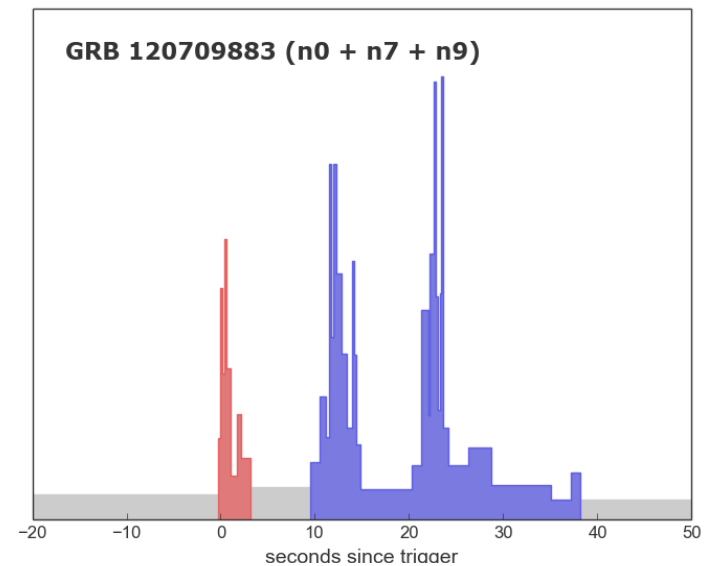

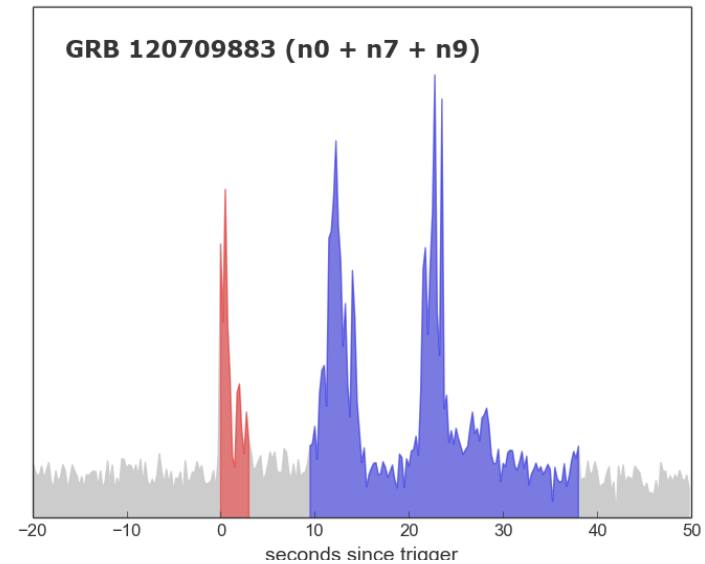

2. Analysis

2.1. Temporal

2.2. Spectral

2.3. Energetics

3. Future work

0. Choose a definition

1. Identify GRBs with precursors

1.1. Assign categories

## **2. Analysis**

2.1. Temporal

2.2. Spectral

2.3. Energetics

3. Future work

0. Choose a definition

1. Identify GRBs with precursors

1.1. Assign categories

2. Analysis

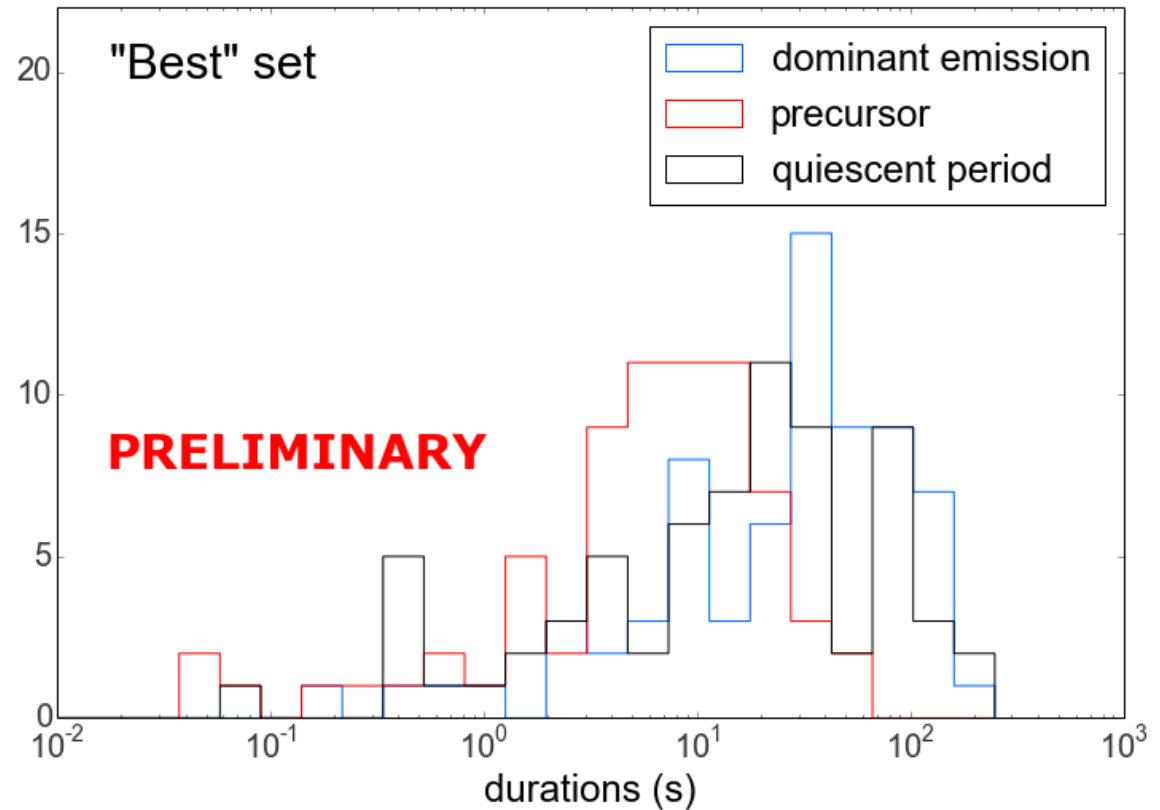

**2.1. Temporal**

2.2. Spectral

2.3. Energetics

3. Future work

Durations

Short GRBs are ~15% of all GBM GRBs,  
but only ~7-8% of the "best" set

0. Choose a definition

1. Identify GRBs with precursors

1.1. Assign categories

2. Analysis

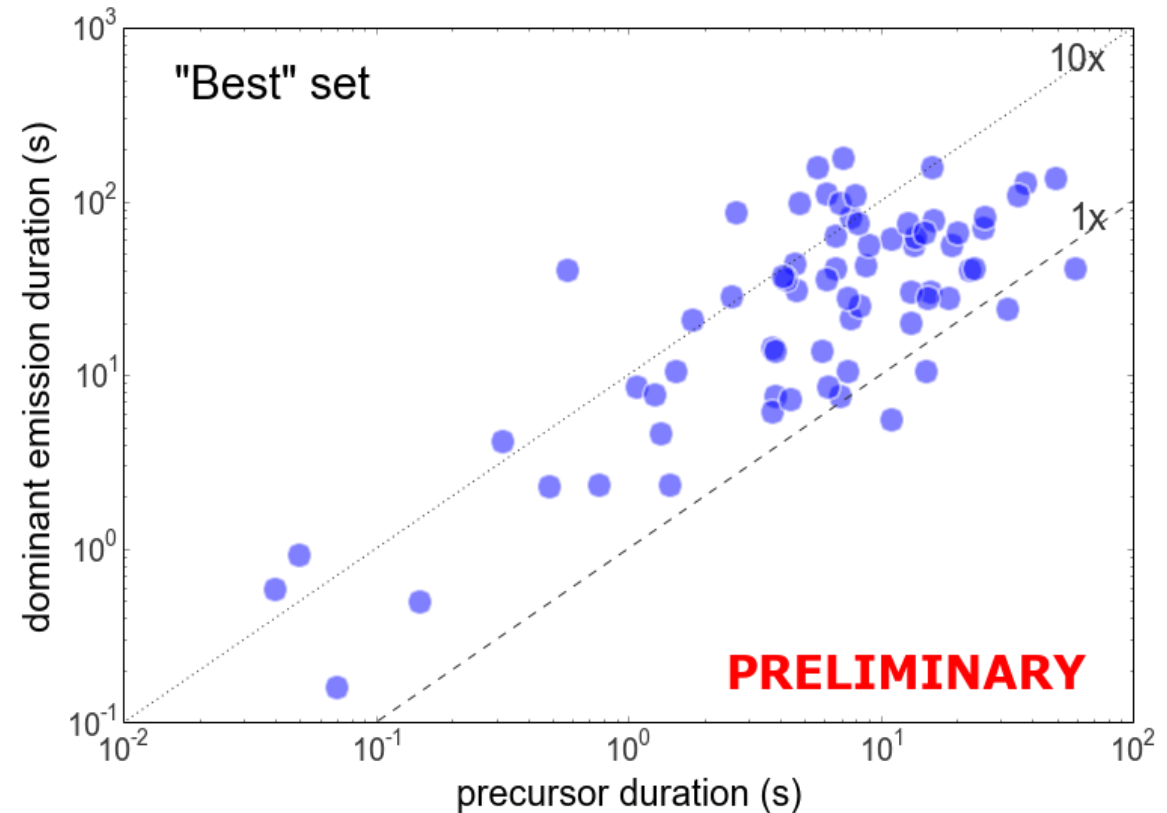

**2.1. Temporal**

2.2. Spectral

2.3. Energetics

3. Future work

Durations: dominant emission vs precursor

Dominant emission almost always **longer** than precursor

0. Choose a definition

1. Identify GRBs with precursors

1.1. Assign categories

2. Analysis

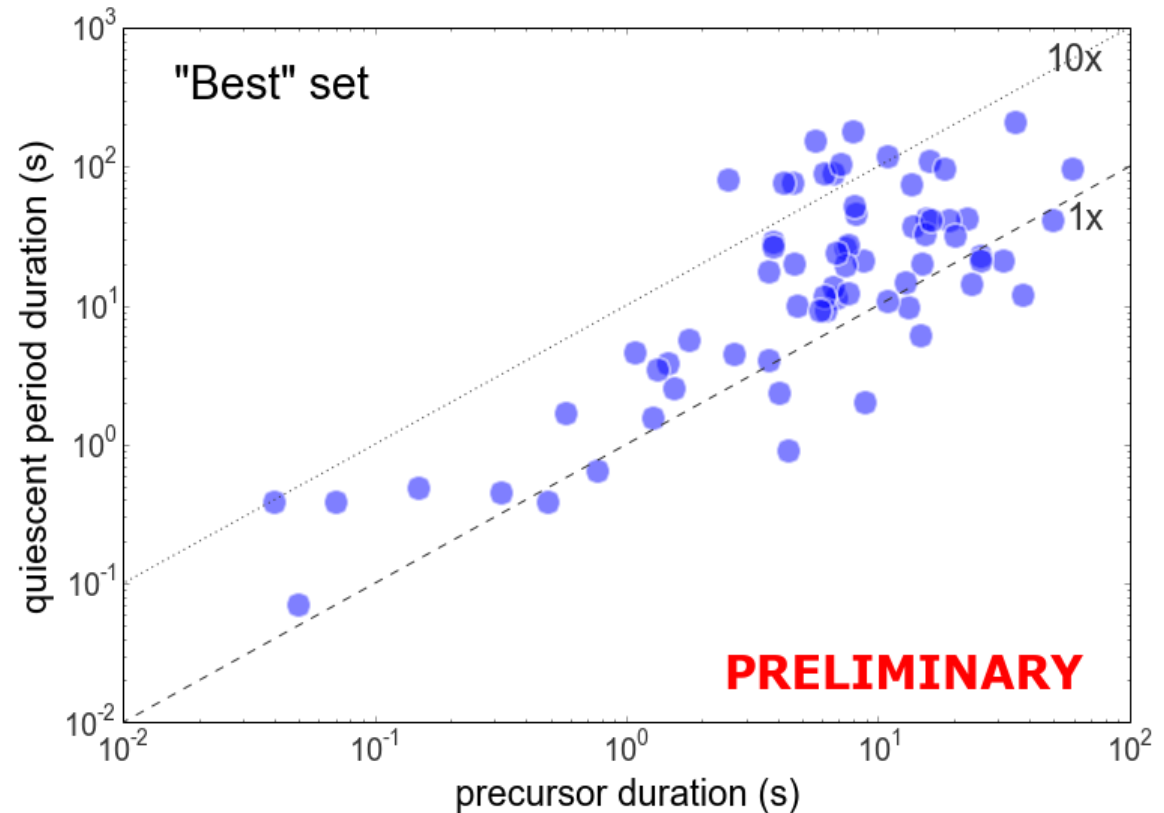

**2.1. Temporal**

2.2. Spectral

2.3. Energetics

3. Future work

Durations: quiescent period vs precursor

Quiescent period **generally longer** than precursor

0. Choose a definition

1. Identify GRBs with precursors

1.1. Assign categories

2. Analysis

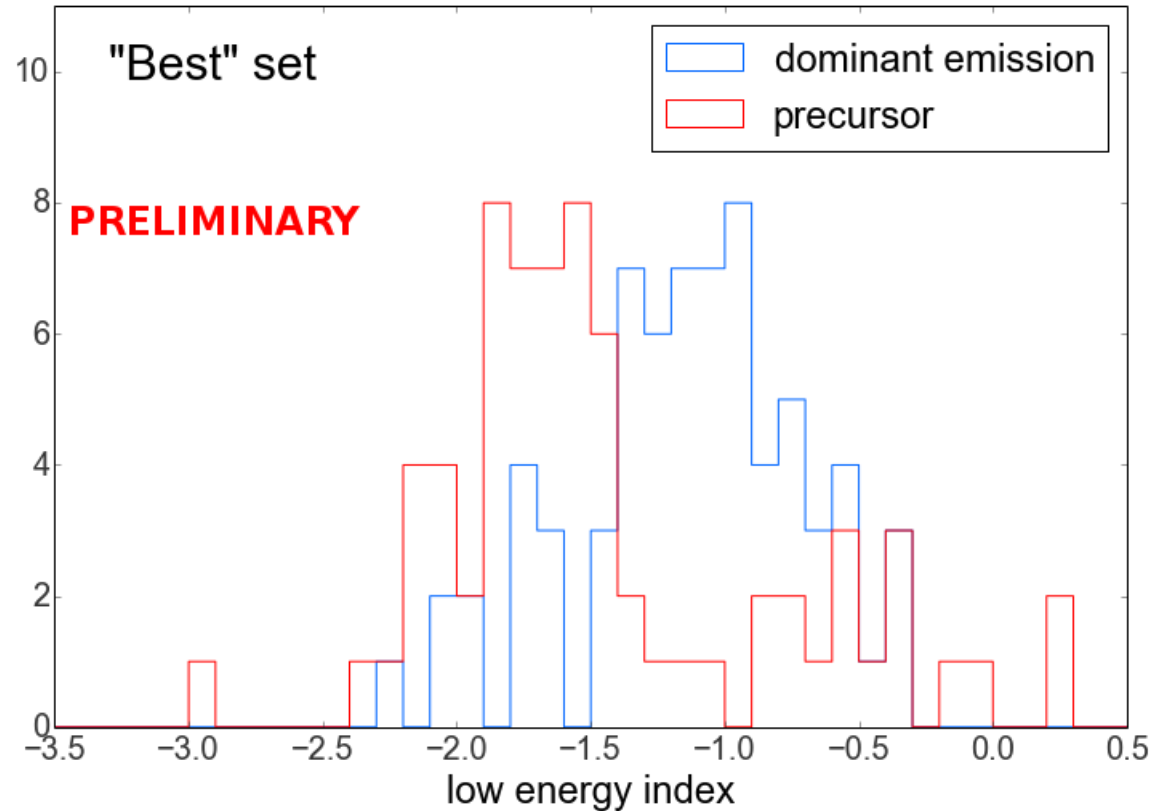

2.1. Temporal

**2.2. Spectral**

2.3. Energetics

3. Future work

Low energy indices

Precursors tend to have **softer low-energy indices** than dominant emission

0. Choose a definition

1. Identify GRBs with precursors

1.1. Assign categories

2. Analysis

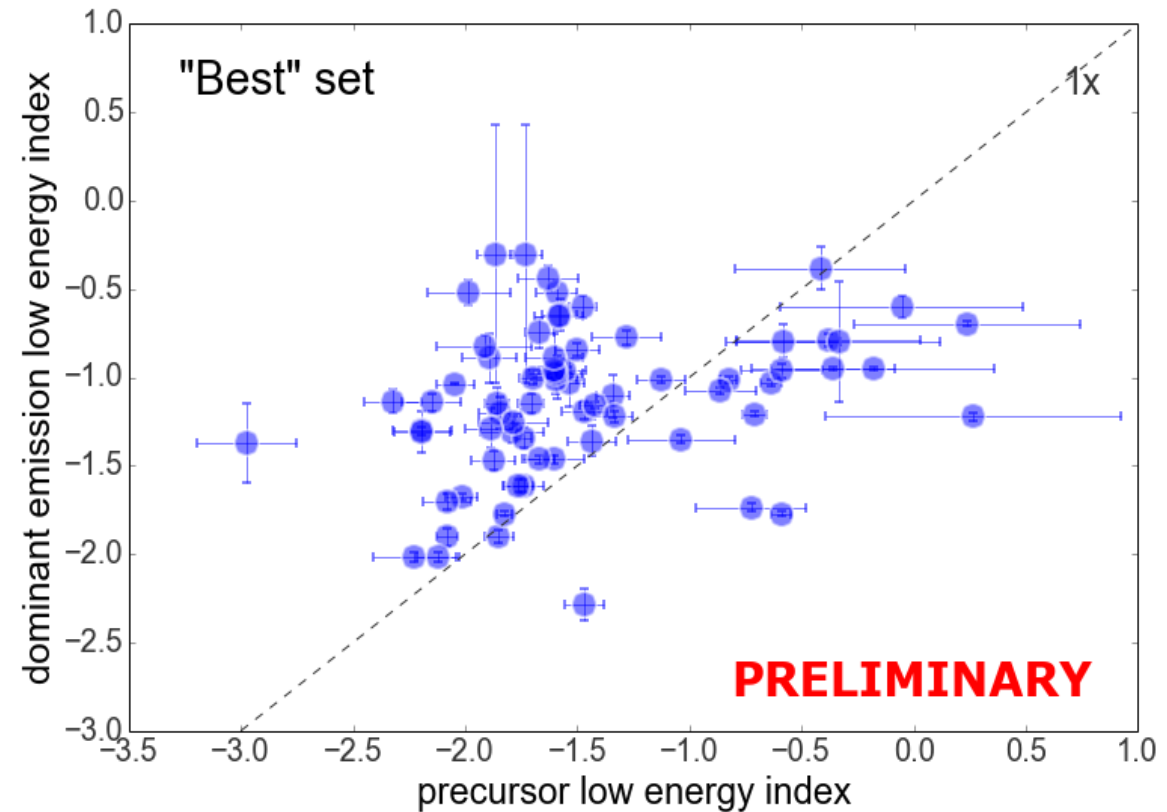

2.1. Temporal

**2.2. Spectral**

2.3. Energetics

3. Future work

Low energy indices

Precursors tend to have **softer low-energy indices** than dominant emission

0. Choose a definition

1. Identify GRBs with precursors

1.1. Assign categories

2. Analysis

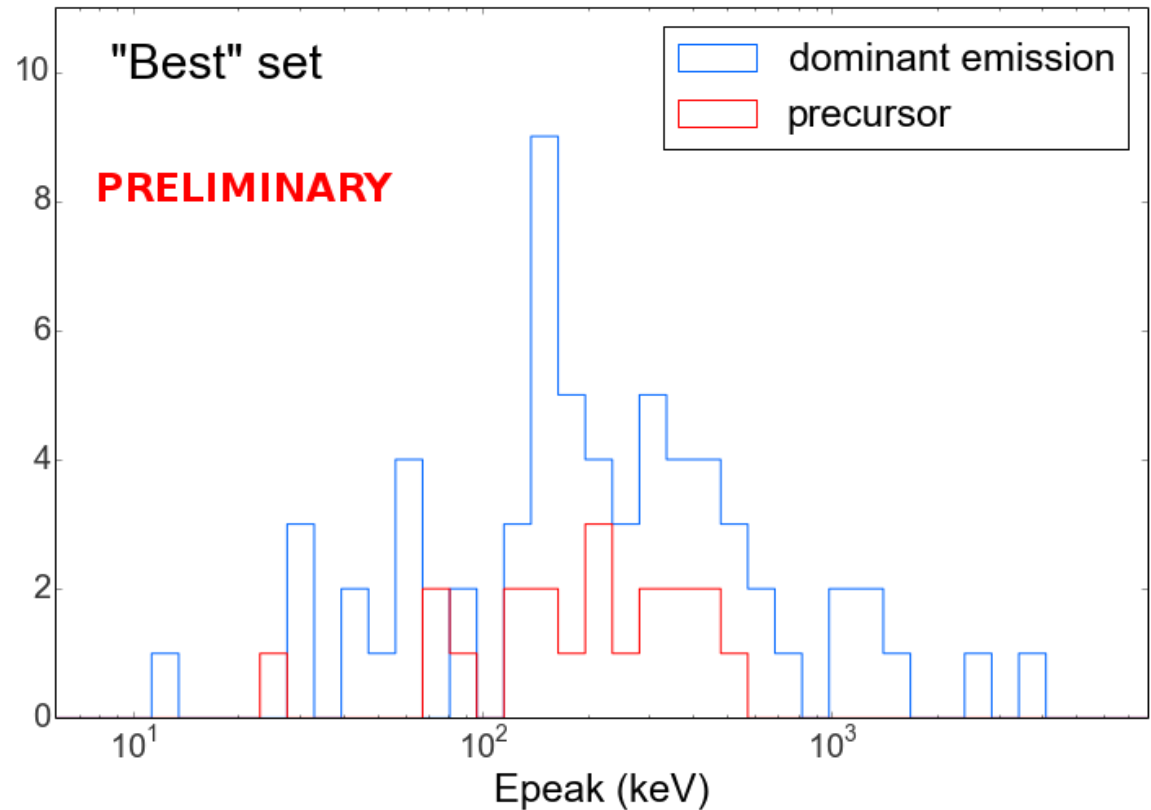

2.1. Temporal

**2.2. Spectral**

2.3. Energetics

3. Future work

Epeak

Epeak distributions look more similar

**BUT**

Precursors are dimmer, Epeak much harder to constrain

0. Choose a definition

1. Identify GRBs with precursors

1.1. Assign categories

2. Analysis

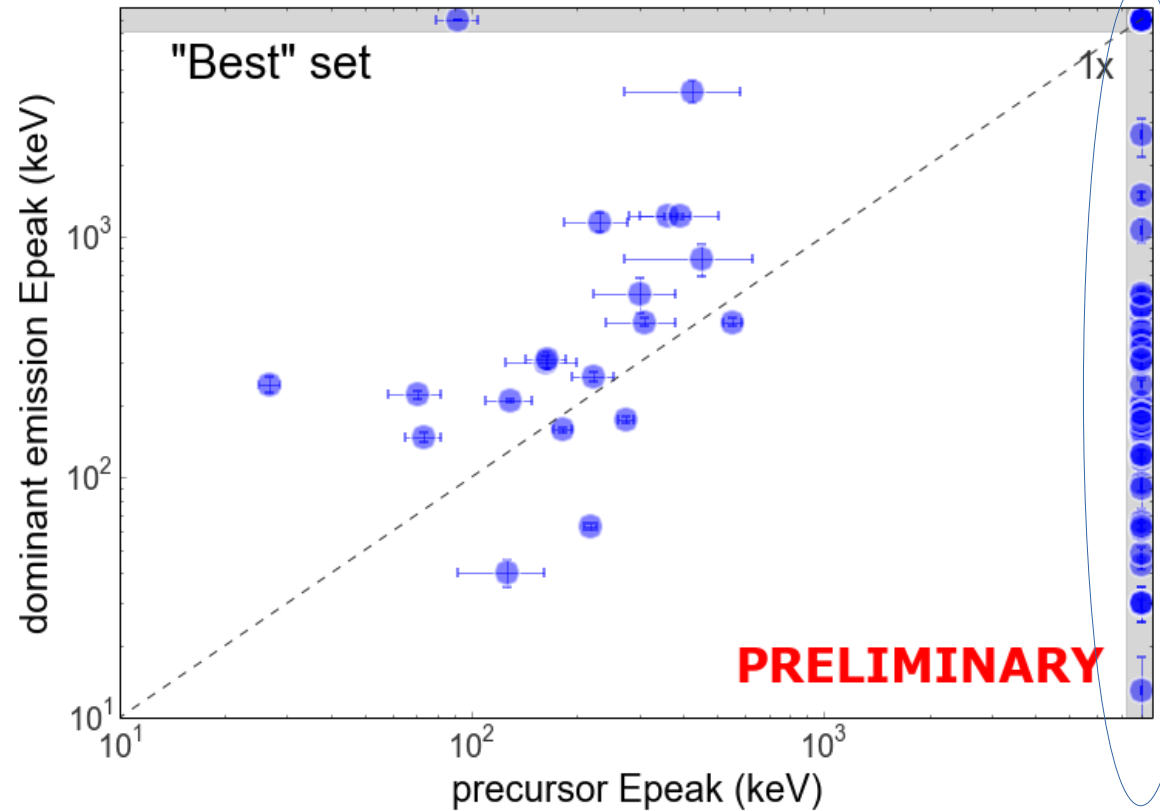

2.1. Temporal

**2.2. Spectral**

2.3. Energetics

3. Future work

Epeaks

Epeak distributions look more similar

**BUT**

Precursors are dimmer, Epeak much harder to constrain

0. Choose a definition

1. Identify GRBs with precursors

1.1. Assign categories

2. Analysis

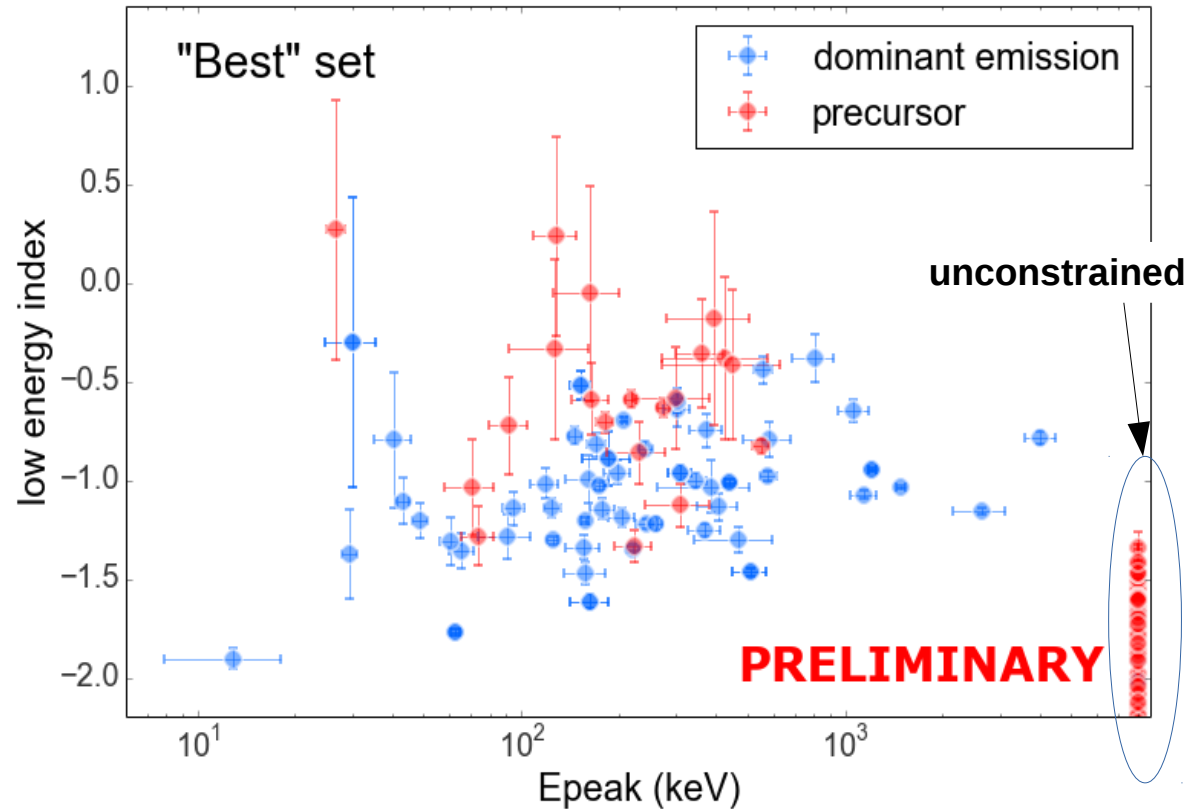

2.1. Temporal

**2.2. Spectral**

2.3. Energetics

3. Future work

indices vs Epeaks

Be cautious drawing conclusions from this!

Could not measure Epeak for many precursors

0. Choose a definition

1. Identify GRBs with precursors

1.1. Assign categories

2. Analysis

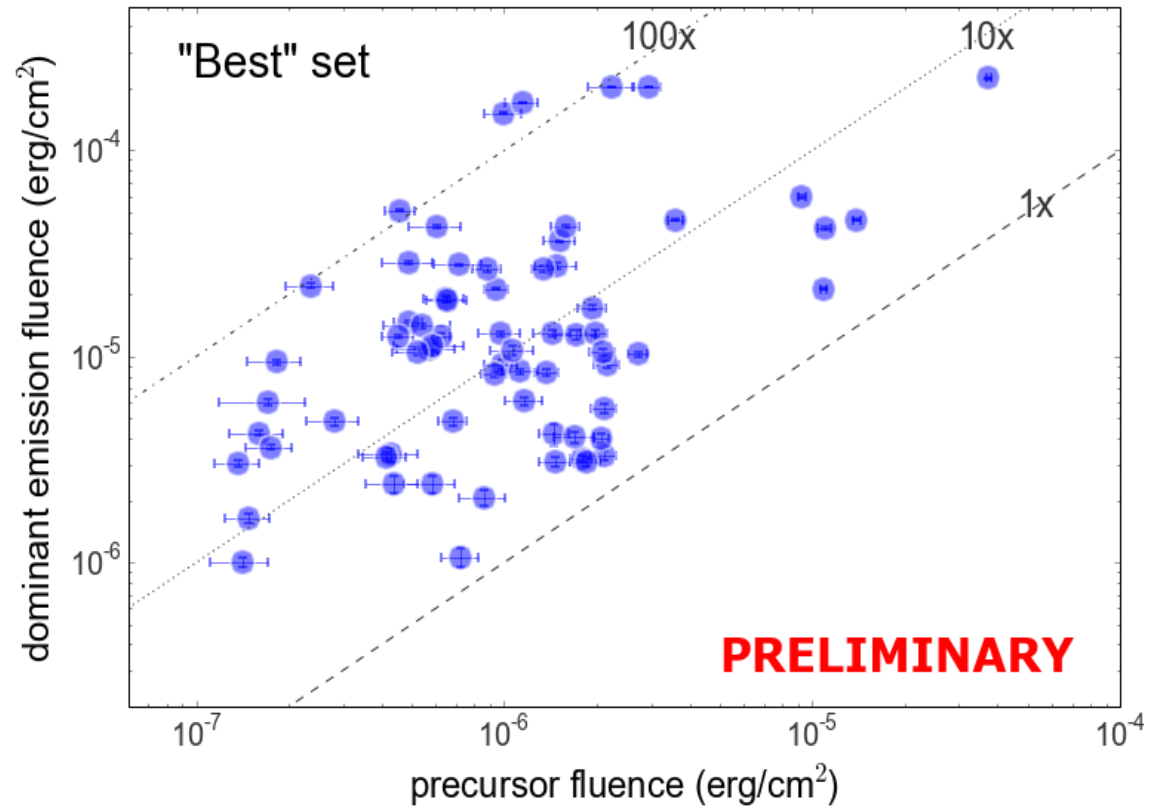

2.1. Temporal

2.2. Spectral

**2.3. Energetics**

3. Future work

Dominant emission fluence vs quiescent duration

Dominant emission has a **higher fluence** than precursor

0. Choose a definition

1. Identify GRBs with precursors

1.1. Assign categories

2. Analysis

2.1. Temporal

2.2. Spectral

2.3. Energetics

3. Future work

## Continued analyses

Add in LAT data!

Include the other categories (the “good” and “OK”)

Include redshifts

Perform time-resolved spectral analyses for the brightest bursts

Test for correlations between properties

Compare different categories

Compare bursts with precursors and all bursts

## Interpretation

Test the “propeller” phase of the magnetar model

Can we say something about the emission region?

## Classification

Working backwards, use measured properties to try to recover categories (i.e., is there such a thing as a “real” precursor?)

## Revisit what's important

Is the defining characteristic the quiescent period?
