# FSSC Science Tools
Data Selection and Exploration

Science Analysis Tools

▶ *Overview of capabilities*

    – *Maximum likelihood tool—spatial-spectral analysis of region (source detection, flux)*

        • *Includes background models*

    – *Pulsars—period analysis, blind searches*

        • *Includes ephemerides DB*

    – *GRBs—temporal cuts, spectral analysis: Maximum likelihood tool, XSPEC*

▶ *Tools and documentation are released through FSSC website (http://fermi.gsfc.nasa.gov/ssc/)*

Science Tools: Documentation

▶ *Multi-tier Documentation*

- *Full set accompanies software release*
  - *Fermi Mission Technical Handbook*
- *Multiple levels:*
  - *Detailed analysis description ('Cicerone')*
  - *Individual tool descriptions (like fhelp)*
 - *Analysis threads (cook book examples)*

Science Tools: Structure

▶ *"Atomic" executables*

– *Allows for divergent analysis without task repetition*

– *Scriptable into more complex analysis chains*

▶ *Standard file types*

– *FITS data i/o*

– *IRAF style param files*

– *XML source models*

– *Text-based supporting files*

▶ *Standard toolsets*

– *FV, DS9, XSPEC*

```
Science Tools: Execution

▶ *Parameters can be input in three ways*

  – *Command line entry - useful for scripting*

    • *Allows modification of "hidden" parameters (likely not needed for standard analyses)*

  – *Last value stored in param file for next use*

  – *Interactive prompted entry*

    • *No access to hidden parameters*

▶ *Parameter input can be mixed*

  – *%gtselect*

  – *%gtselect clobber=no*

  – *%gtselect clobber=no, infile=events.fits, outfile=events_cut.fits, etc...*
Data Access: File types

► *Events File (2 types)*

- – **Photon** *files contain all needed information for science analysis*
- – **Extended** *files contain additional information about each event that is used for specialized analysis*
  - • *not needed by any science analysis tool*
- – *All event classes are available in both file types*
  - • ***Diffuse - Highest quality, lowest background contamination, Use this for most analyses!***
  - • *Source - Moderate quality*
  - • *Transient - Loose quality definition, significant background contamination*
► *Spacecraft File*

- – *Spacecraft Orientation and orbit position information (where are we and where are we pointed)*
- – *One entry every 30 seconds*

Data Access: Downloads

▶ *Download data from:*

- *http://fermi.gsfc.nasa.gov/ssc/data/analysis/scitools/extract_latdata.html*
  - *Allows retrieval of data for a specified region*
  - *Default values correspond to suggested data selections for most analysis types*

- http://fermi.gsfc.nasa.gov/cgi-bin/ssc/LAT/WeeklyFiles.cgi
  - *Weekly files contain only Diffuse-class events from the photon files*
  - *Weekly spacecraft files are also available*

- *FTP: Can be retrieved automatically using wget*
  - *Spacecraft: ftp://legacy.gsfc.nasa.gov/fermi/data/lat/weekly/*
  - *Photon: ftp://legacy.gsfc.nasa.gov/fermi/data/lat/allsky/*

Data Access: Data Server - 1

LAT Photon, Extended, and Spacecraft Data Query

The Photon database currently holds 224948768 photons collected between 2008-08-04T15:43:37 and 2009-12-15T11:46:39 (239557417 and 282570399 seconds Mission Elapsed Time (MET)).

NOTE: For queries encompassing the whole sky (or close to it), please use the pre-generated Weekly Allsky Files.

For all-sky data, faster to download these

Start Search   Reset

NOTE: additional selections must be applied to data downloaded from the data server prior to use in a data analysis. See **recommended data selections** and **LAT caveats** for more details.

1. Do you want to search around a position ... ?

Object Name Or Coordinates:

(e.g. '8 34 12, -45 45 00' or '128.55, -45.75' or 'Vela')

**Coordinate System:** J2000

Selection Radius: 15 degrees

Will write DSS position keywords

... and/or search by date?

Observations Dates: Gregorian

Can use "START" and "END"

If you do not enter anything, it will return results from the past 6 months.

Accessible from Data Access menu

FAQ

Data Access: Data Server - 2

... and/or search by energy?

Default energies: 100MeV - 300 GeV

Energy Range: [   ] MeV

Enter the minimum and (optional) maximum energy, separated by a comma.
(By default, only data between 100 MeV and 300 GeV is returned.)

2. What missions and catalogs do you want to search?

FERMI Data

☑ Photon Data   ☐ Extended Data   ☑ Spacecraft Data   Select type(s) of data files

NOTE: additional selections must be applied to data downloaded from the data server prior to use in a data analysis. See **recommended data selections** and **LAT caveats** for more details.

Preparing your data

- *Prior to beginning an analysis you must:*

    – *Select the event class (Diffuse in almost all cases)*

    – *Exclude time intervals where the bright Earth limb comes close to your region of interest (zenith angle of 105 degrees)*

- *Combine photon files if necessary*

    – *For large time ranges you will likely have multiple photon files*

    – *Combine using @filelist.txt syntax where filelist.txt is a listing of all photon files to be included, one per line*

Data Selection - 1

► *Event-specific cuts can be made with **gtselect***

 – *Time range, energy range, position, ROI radius, zenith angle*

```
[wcne-2-147-110:Meetings/Oct2009_workshop/3c454_workshop] eferrara% gtselect evclsmin=3 evclsmax=3
Input FT1 file[@OJ287_indata.txt] L090923112502E0D2F37E71_PH00.fits
Output FT1 file[L090821150043E0D2F37E96_cut.fits] 3c454_ecut.fits
RA for new search center (degrees) (0:360) [133.704] 343.490616
Dec for new search center (degrees) (-90:90) [20.1085] 16.148211
radius of new search region (degrees) (0:180) [15] 15
start time (MET in s) (0:) [252460800] 266976000
end time (MET in s) (0:) [268012800] 275369897
lower energy limit (MeV) (0:) [100] 300
upper energy limit (MeV) (0:) [300000] 300000
maximum zenith angle value (degrees) (0:180) [105]
Done.
```

Or @filelist.txt

Keyword values should correspond EXACTLY to values in header (if they exist)

► *Temporal cuts using spacecraft file keywords are made with **gtmktime***

 – *This MUST be applied if a zenith cut was used with gtselect*

```
[wcne-2-147-110:Meetings/Oct2009_workshop/3c454_workshop] eferrara% gtmktime
Spacecraft data file[3c454_ecut.fits] L090923112502E0D2F37E71_SC00.fits
Filter expression[DATA_QUAL==1]
Apply ROI-based zenith angle cut[yes]
Event data file[L090821150043E0D2F37E96_cut.fits] 3c454_ecut.fits
Output event file name[L090821150043E0D2F37E96_gticut.fits] 3c454_ecut_gti.fits
```
Data Selection - 2

► *Different cuts should be used for different types of data analysis*

  – *Point Source analysis*
    - *For hard spectrum sources, may benefit from a higher minimum energy cut due to energy-dependent PSF*

  – *Pulsar Timing analysis*
    - *Requires that spacecraft file span a greater time range than event file*

  – *GRB analysis (<200 s)*
    - *Uses "Transient" class photons (evclsmin=1, evclsmax=3)*

► *The current set of cuts can be reviewed using **gtvcut***

► *Recommended cuts are documented at:*

http://fermi.gsfc.nasa.gov/ssc/data/analysis/documentation/Cicerone/Cicerone_Data_Exploration/Data_preparation.html
Binning for Visualization - 1

▶ ***gtbin*** *can be used to create several useful visualization products*

    – *Raw counts map*

    – *Quick-look light curve*

    – *PHA1 file*

▶ *Results are in format used by other science tools like* **XSPEC**

    – *Includes WSC keywords for ease of viewing*

▶ *Useful to get a rough idea of the data, but do not include:*

    – *Exposure correction*

    – *Instrument responses*

   – *Requires Likelihood analysis for valid results*

Binning for Visualization - 2

► *Making a counts map*

```
[wcne-2-147-110:Meetings/Oct2009_workshop/3c454_workshop] eferrara% gtbin
This is gtbin version ScienceTools-v9r15p2-fssc-20090808
Type of output file (CCUBE|CMAP|LC|PHA1|PHA2) [CCUBE] CMAP
Event data file name[L090821150043E0D2F37E96_gticut.fits] 3c454_ecut_gti.fits
Output file name[L090821150043E0D2F37E96_countscube.fits] 3c454_ecut_gti_cmap.fits
Spacecraft data file name[NONE] L090923112502E0D2F37E71_SC00.fits
Size of the X axis in pixels[120] 300
Size of the Y axis in pixels[120] 300
Image scale (in degrees/pixel)[0.25] .1
Coordinate system (CEL - celestial, GAL -galactic) (CEL|GAL) [CEL] CEL
First coordinate of image center in degrees (RA or galactic l)[133.704] 343.490616
Second coordinate of image center in degrees (DEC or galactic b)[20.1085] 16.148211
Rotation angle of image axis, in degrees[0] 0
Projection method e.g. AIT|ARC|CAR|GLS|MER|NCP|SIN|STG|TAN:[AIT] AIT
```

Here, ROI radius × image scale = size of each axis

Keyword values should correspond EXACTLY to values in header
Binning for Visualization - 3

▶ *Making a quick-look lightcurve*

```
[wcne-2-147-110:Meetings/Oct2009_workshop/3c454_workshop] eferrara% gtbin
This is gtbin version ScienceTools-v9r15p2-fssc-20090808
Type of output file (CCUBE|CMAP|LC|PHA1|PHA2) [CMAP] LC
Event data file name[3c454_ecut_gti.fits]
Output file name[3c454_ecut_gti_cmap.fits] 3c454_ecut_gti_lightcurve.fits
Spacecraft data file name[L090923112502E0D2F37E71_SC00.fits]
Algorithm for defining time bins (FILE|LIN|SNR) [LIN]
Start value for first time bin in MET[0] 266976000
Stop value for last time bin in MET[0] 275369897
Width of linearly uniform time bins in seconds[0] 209850
```

Keyword values should correspond EXACTLY to values in header

Caution! Final bin may not be valid if full duration is not included

Binning for Visualization - 4

► *Gtbin products are easily viewable in fv or ds9*
