Contributions to the gamma-ray background

Cosmic Rays

Blazars & AGN's

Starburst galaxies

Pulsars

Dark Matter

Dark Matter Remnants

Unknown systematics

Solar System objects

Individual emission from any single object is NOT distinguishable

Solar System objects

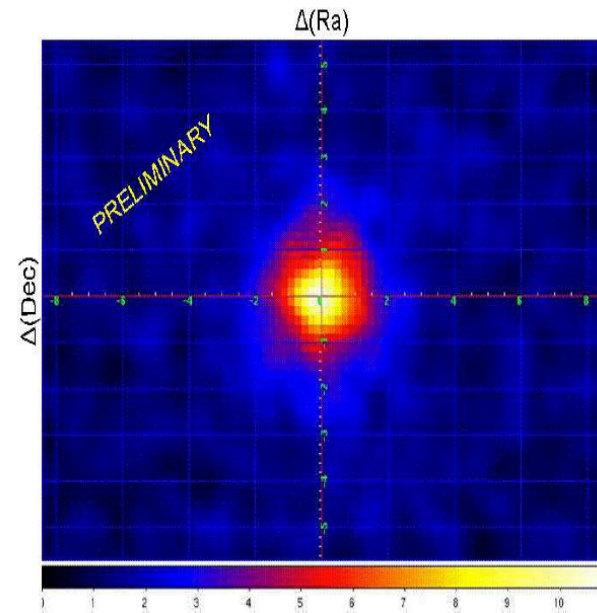

See Morris, Geophys. R. 89:10685 (1984), Moskalenko & Porter, ApJ 670:1467 (2007), ApJ 692:L54 (2009), Moskalenko et al., ApJ 681:1708 (2008)

Solar system contribution to the gamma-ray background

FERMI detection of the Moon

Moskalenko & Porter, 692:L54 (2009)

IMPORTANT

Contribution from the solar system
is **unconstrained**

Giglietto et al., arXiv:0907.0543 (2009)

Question: Is it possible to “extract” the contribution of objects that may exhibit proper motion?

Alex Geringer-Sameth & Koushiappas [arXiv:1012.1873]

The two-point space-time correlation function

$$\xi_{\theta}(\Delta\theta) = \left\langle \frac{C(\Delta\theta) - \bar{N}(\Delta\theta)}{\bar{N}(\Delta\theta)} \right\rangle_p$$

The two-point space-time correlation function

$$\xi_{\theta}(\Delta\theta) = \left\langle \frac{C(\Delta\theta) - \bar{N}(\Delta\theta)}{\bar{N}(\Delta\theta)} \right\rangle_p$$

$$\xi_{\theta,t}(\Delta\theta, \Delta t) = \left\langle \frac{C(\Delta\theta, \Delta t) - \bar{N}(\Delta\theta, \Delta t)}{\bar{N}(\Delta\theta, \Delta t)} \right\rangle_{\text{events}}$$

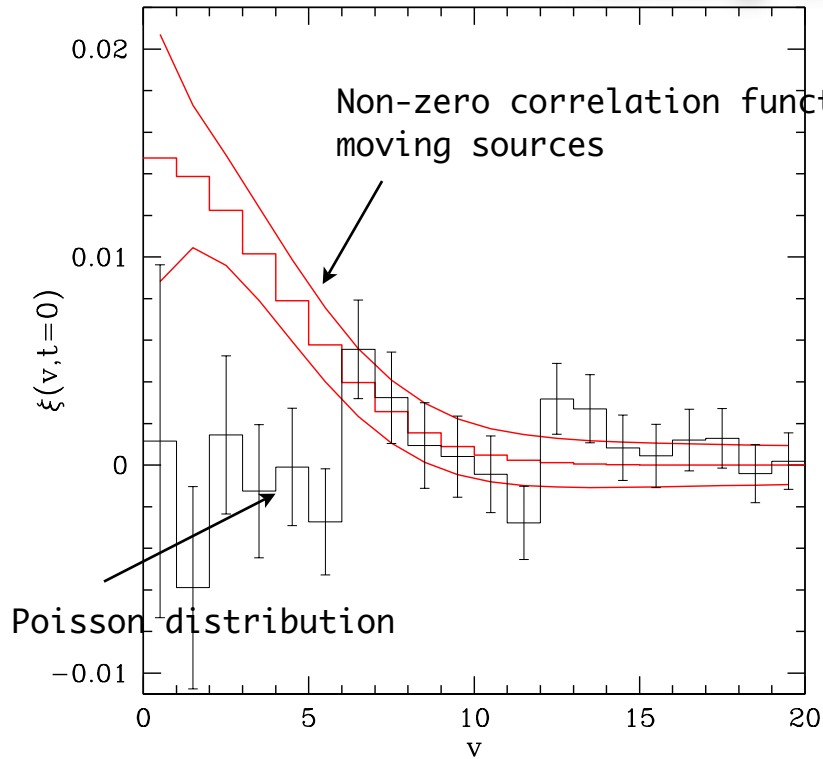

Testing the formalism

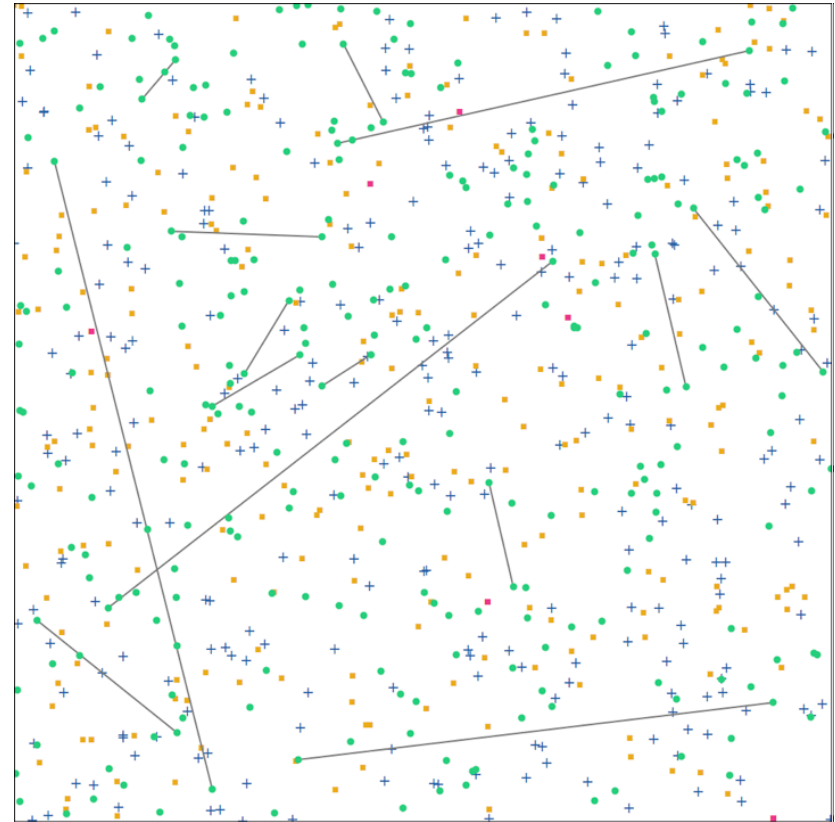

Testing the formalism

Less than 5% of events comes from sources which generated more than 1 events

95% of these generate exactly 2 events

Testing the formalism

Less than 5% of events comes from sources which generated more than 1 events

95% of these generate exactly 2 events

Shape: Velocity distribution
Amplitude: Flux

Conclusion

No individual source detection \neq No information

New tools \longrightarrow Potential discoveries
