AI#14:
End-to-End GLAST Narrative

David Band (GSSC/JCA-UMBC)

Action Item #14:

The GSSC will develop text describing the end-to-end process from the detection of a photon flux until the resulting photons are analyzed. This text can be included in the PDMP.

Status: I've started writing this narrative but am far from done. I intend to include details such as why Likelihood is necessary for analyzing LAT data, how data will be served, etc.
